## Mission: Disaster Relief

Two forest rangers spot a forest fire. The first ranger sights the second ranger 8 km due east. The first forest ranger sights the fire at a bearing of $\mathrm{N} 28^{\circ} \mathrm{E}$. The second forest ranger sights the forest fire at a bearing of $\mathrm{N} 47^{\circ} \mathrm{W}$.

- You need to tell each forest ranger how far, to the nearest hundredth of a km, they must walk to the fire.
